October/November 2011

CONFIDENTIAL INSTRUCTIONS

**Great care should be taken to ensure that any confidential information given does not reach the candidates either directly or indirectly.**

**No access to the Question Paper is permitted in advance of the examination.**

If you have any problems or queries regarding these Instructions, please contact CIE  
by e-mail: [international@cie.org.uk](mailto:international@cie.org.uk),  
by phone: +44 1223 553554,  
by fax: +44 1223 553558,  
stating the Centre number, the nature of the query and the syllabus number quoted above.

This document consists of **6** printed pages and **2** blank pages.

## Preparing apparatus

These instructions detail the apparatus required for the experiments in the Question Paper. It is essential that absolute confidentiality is maintained in advance of the examination: the contents of these instructions must not be revealed either directly or indirectly to candidates.

No access is permitted to the Question Paper in advance of the examination.

If you have problems or queries regarding these instructions, please contact CIE:

by e-mail: international@cie.org.uk,  
or by telephone: +44 1223 553554,  
or by fax: +44 1223 553558,

stating the nature of the query and quoting the syllabus and paper numbers (9702/36).

It is assumed that the ordinary apparatus of a Physics laboratory will be available.

## Number of sets of apparatus

The number of sets of apparatus provided for each experiment should be  $\frac{1}{2}N$ , where  $N$  is the number of candidates taking the examination. There should, in addition, be a few spare sets of apparatus available in case problems arise during the examination.

## Organisation of the examination

Candidates should be allowed access to the apparatus for each experiment for one hour only. After spending one hour on one experiment, candidates should change over to the other experiment. The order in which a candidate attempts the two experiments is immaterial.

## Assistance to Candidates

Candidates should be informed that, if they find themselves in real difficulty, they may ask the Supervisor for practical assistance, but that the extent of this assistance will be reported to the Examiner, who may make a deduction of marks.

Assistance should only be given:

when it is asked for by a candidate,  
or as directed in the Notes sections of these instructions,  
or where apparatus is seen to have developed a fault.

Assistance should be restricted to enabling candidates to make observations and measurements. Observations and measurements must not be made for candidates, and no help should be given with data analysis or evaluation.

All assistance given to candidates must be reported on the Supervisor's Report Form.

## Faulty apparatus

In cases of faulty apparatus (not arising from a candidate's mishandling) that prevent the required measurements being taken, the Supervisor may allow extra time to give the candidate a fair opportunity to perform the experiment as if the fault had not been present. The candidate should use a spare copy of the Question Paper when the fault has been rectified or when working with a second set of apparatus.

## Supervisor's Report

The Supervisor should complete the Supervisor's Report Form on pages 7 and 8 and enclose it in the envelope containing the answers of the candidates. If more than one envelope is used, a copy of the report must be enclosed in each envelope.

### Question 1

#### Apparatus requirements (per set of apparatus unless otherwise specified)

1 m length of strong, thin string. See Note 1.

Two 200 g masses with hooks (e.g. two mass hangers, each with masses to a total of 200 g).

Two stands, each with a boss.

Two smoothly-running pulleys suitable for mounting at fixed positions on stands, with extra bosses if necessary.

Metal or wooden rod about 1 cm diameter and minimum length 60 cm, to act as a support (e.g. the rod from a stand).

Stopwatch reading to 0.1 s or better.

50 g mass hanger with four 10 g and three 50 g slotted masses, clearly labelled with their values.

Metre rule with a millimetre scale.

Set square.

Protractor.

#### Notes

- 1 The string should have a loop tied at each end and another loop at its centre. Each loop should have a circumference of about 2 cm.
- 2 The apparatus should be partially assembled as shown in Fig. 1.1. If it is to be used by another candidate, it should be restored to this original state.

Fig. 1.1

#### Information required by Examiners

Sample set of numerical results, clearly labelled "Supervisor's Results" and obtained out of sight of the candidates.

## Question 2

### Apparatus requirements (per set of apparatus unless otherwise specified)

40 cm length of smooth, flexible plastic or rubber tubing with an internal diameter of approximately 8 mm.

Steel ball (ball bearing) of diameter approximately 6.5 mm. It should run freely through the tubing. See Note 1.

Small tray (e.g. a petri dish) to store the steel ball.

Stopwatch reading to 0.1 s or better.

Two blocks of wood, each approximately 4 cm × 4 cm × 4 cm. See Note 2.

Two stands each with a boss and clamp.

Metre rule with a millimetre scale.

30 cm ruler with a millimetre scale.

Two set squares.

Shallow tray about 40 cm × 30 cm containing dry sand (or fine soil) to a depth of about 1 cm.

### Notes

- 1 Extra ball bearings should be available.
- 2 A hole should be drilled through each block of wood and one end of the tubing pushed through the hole so that it projects about 0.5 cm, as shown in Fig. 2.1.

**Fig. 2.1**

The size of the hole should be such that it grips the tubing firmly without crushing it.

- 3 The apparatus should be laid out on the bench. If it is to be used by another candidate, it should be restored to its original state.

### Information required by Examiners

Sample set of numerical results clearly labelled “Supervisor’s Results”, obtained out of sight of the candidates.

**This form should be completed and sent to the Examiner with the scripts.**

**SUPERVISOR'S REPORT FORM**

**General Certificate of Education Advanced Subsidiary Level and Advanced Level**

**October/November Session 2011**

The Supervisor's Report should give full details of:

- (a)** any help given to a candidate (including the nature of the help given and the name and candidate number of the candidate);
- (b)** any cases of faulty apparatus (including the nature of the problem, the action taken to rectify it, any additional time allowed, and the name and candidate number of the candidate);
- (c)** any accidents that occurred during the examination;
- (d)** any other difficulties experienced by candidates, or any other information that is likely to assist the Examiner, especially if this information cannot be discovered in the scripts.

Cases of individual hardship, such as illness, bereavement or disability, should be reported direct to CIE on the normal Special Consideration form.

**Information required by Examiners**

For each question, please enclose a sample set of numerical results, obtained out of sight of the candidates and clearly labelled "Supervisor's Results".

**Supervisor's Report**

**Supervisor's Report (continued)****Declaration**

(to be signed by the Supervisor)

The preparation of this practical examination has been carried out so as to maintain fully the security of the examination.
