Further Pure Mathematics FP2 Advanced/Advanced Subsidiary

Friday 6 June 2014 – Afternoon

Time: 1 hour 30 minutes

Materials required for examination	Items included with question paper
Mathematical Formulae (Pink)	Nil

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation or symbolic differentiation/integration, or have retrievable mathematical formulae stored in them.

Instructions to Candidates

In the boxes above, write your centre number, candidate number, your surname, initials and signature. Check that you have the correct question paper.

Answer ALL the questions.

You must write your answer to each question in the space following the question.

When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information for Candidates

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2).

There are 8 questions in this question paper. The total mark for this paper is 75.

There are 28 pages in this question paper. Any blank pages are indicated.

Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled. You should show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

1.	(a)	Express $\frac{2}{4r^2 - 1}$	in partial fractions.	
----	-----	------------------------------	-----------------------	--

(2)

(b) Hence use the method of differences to show that

$$\sum_{r=1}^{n} \frac{1}{4r^2 - 1} = \frac{n}{2n+1}$$

(3)

$3x - 5 < \frac{2}{}$	
$3x-5 < \frac{1}{x}$	
	(5)

Leave blank

3. (a) Find the general solution of the differential equation

$$\frac{dy}{dx} + 2y \tan x = e^{4x} \cos^2 x, \qquad -\frac{\pi}{2} < x < \frac{\pi}{2}$$

giving your answer in the form y = f(x).

(6)

(b) Find the particular solution for which y = 1 at x = 0

(2)

estion 3 continued	

Leave blank

4.

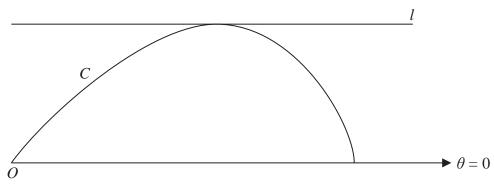

Figure 1

Figure 1 shows the curve C with polar equation

$$r = 2\cos 2\theta, \qquad 0 \leqslant \theta \leqslant \frac{\pi}{4}$$

The line l is parallel to the initial line and is a tangent to C.

Find an equation of l, giving your answer in the form $r = f(\theta)$.

(9	"
(-	,

$$y\frac{\mathrm{d}^2 y}{\mathrm{d}x^2} + 2\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right)^2 + 2y = 0$$

(a) Find an expression for $\frac{d^3y}{dx^3}$ in terms of $\frac{d^2y}{dx^2}$, $\frac{dy}{dx}$ and y. (4)

Given that y = 2 and $\frac{dy}{dx} = 0.5$ at x = 0,

(b) find a series solution for y in ascending powers of x, up to and including the term in x^3 .

(5)

estion 5 continued		

6. The transformation *T* maps points from the *z*-plane, where z = x + iy, to the *w*-plane, where w = u + iv.

The transformation *T* is given by

$$w = \frac{z}{iz+1}, \quad z \neq i$$

The transformation T maps the line l in the z-plane onto the line with equation v = -1 in the w-plane.

(a) Find a cartesian equation of l in terms of x and y.

(5)

The transformation *T* maps the line with equation $y = \frac{1}{2}$ in the *z*-plane onto the curve *C* in the *w*-plane.

- (b) (i) Show that C is a circle with centre the origin.
 - (ii) Write down a cartesian equation of C in terms of u and v.

(6)

estion 6 continued	

Leave	
hlank	

7. (a) Use de Moivre's theorem to show that

$$\sin 5\theta = 16 \sin^5 \theta - 20 \sin^3 \theta + 5 \sin \theta$$

(b) Hence find the five distinct solutions of the equation

$$16x^5 - 20x^3 + 5x + \frac{1}{2} = 0$$

giving your answers to 3 decimal places where necessary.

(5)

(5)

(c) Use the identity given in (a) to find

$$\int_0^{\frac{\pi}{4}} (4\sin^5\theta - 5\sin^3\theta) d\theta$$

expressing your answer in the form $a\sqrt{2} + b$, where a and b are rational numbers. (4)

estion 7 continued		

8. (a) Show that the substitution $x = e^z$ transforms the differential equation

$$x^{2} \frac{d^{2}y}{dx^{2}} + 2x \frac{dy}{dx} - 2y = 3\ln x, \quad x > 0$$
 (I)

into the equation

$$\frac{\mathrm{d}^2 y}{\mathrm{d}z^2} + \frac{\mathrm{d}y}{\mathrm{d}z} - 2y = 3z \tag{II}$$

(b) Find the general solution of the differential equation (II).

(6)

(7)

(c) Hence obtain the general solution of the differential equation (I) giving your answer in the form y = f(x).
