Materials required for examination	Items included with question papers
Mathematical Formulae (Pink)	Nil

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

#### **Instructions to Candidates**

In the boxes above, write your centre number, candidate number, your surname, initials and signature. Check that you have the correct question paper.

Answer ALL the questions.

You must write your answer to each question in the space following the question.

When a calculator is used, the answer should be given to an appropriate degree of accuracy.

#### **Information for Candidates**

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2).

There are 9 questions in this question paper. The total mark for this paper is 75.

There are 28 pages in this question paper. Any blank pages are indicated.

#### **Advice to Candidates**

You must ensure that your answers to parts of questions are clearly labelled. You should show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

$$f(x) = x^3 - \frac{7}{x} + 2, \quad x > 0$$

- (a) Show that f(x) = 0 has a root  $\alpha$  between 1.4 and 1.5 (2)
- (b) Starting with the interval [1.4, 1.5], use interval bisection twice to find an interval of width 0.025 that contains  $\alpha$ .

**(3)** 

(c) Taking 1.45 as a first approximation to  $\alpha$ , apply the Newton-Raphson procedure once to  $f(x) = x^3 - \frac{7}{x} + 2$  to obtain a second approximation to  $\alpha$ , giving your answer to 3 decimal places.
